

Please stop attacking satellite radio!!! I oppose HR4026. I urge the FCC to reject NAB's petition 04-160. Satellite radio offers the public a real choice in thier listening abilities and on demand traffic and weather offers a faster,better way to keep up to the minute reports without the endless commercials subjected to AM and FM radio. Remember we as satellite radio subscribers PAY for this option.This is not free radio and we want what we pay for! The NAB wants to do the same thing with HD radio,does it not? Technology has allowed this great service and it should not be restricted in a free market .If technology were restricted and businesses were not allowed to advance the product for the customers,would we still be using the Pony Express?I think our government has better things to focus on than keeping the members of NAB fat and happy.The NAB should focus on improving thier product,not stopping someone from making something better!
